Version Tested  
2011 & 2012

During the year 2011 home user security products were continuously evaluated in 5 certification tests using their default settings. We always used the most current publicly-available version of all products for the testing. They were allowed to update themselves at any time and query their in-the-cloud services. We focused on realistic test scenarios and challenged the products against real-world threats. Products had to demonstrate their capabilities using all components and protection layers.
