Tested Software

Free Android Security

Company

Avira

Version Tested
2.0 & 2.1

During the year 2013 mobile security products for Android were continuously evaluated in 6 tests using their default settings. We always used the most current publicly-available version of all products for the testing. They were allowed to update themselves at any time and query their in-the-cloud services. We focused on malware detection and usability, including performance and false positives. Products had to demonstrate their capabilities using all components and protection layers.
