# Antivirus Security

Company

## Avira

Version Tested  
3.8, 3.9, 4.0, 4.1 & 4.2

During the year 2015 mobile security products for Android were continuously evaluated in 6 tests using their default settings. We always used the most current publicly-available version of all products for the testing. They were allowed to update themselves at any time and query their in-the-cloud services. We focused on malware detection and usability, including performance and false positives. Products had to demonstrate their capabilities using all components and protection layers.
