Tested Software

Mobile Security

Company

BullGuard

During the year 2017 mobile security products for Android were continuously evaluated in 6 tests using their default settings. We always used the most current publicly-available version of all products for the testing. They were allowed to update themselves at any time and query their in-the-cloud services. We focused on malware detection and usability, including performance and false positives. Products had to demonstrate their capabilities using all components and protection layers.

Magdeburg, 1st February 2018
